DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-70 drawn a method and apparatus for generating an offset sequence from a reference sequence by a first offset, class 708, subclass 250.
 - II. Claims 71-85, drawn to a sequence generating method and apparatus that output a plurality of bits of in each iteration, classified in class 708, subclass 253.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (I) does not require the particular sequence generator of the subcombination (II) as claimed for patentability because claims to both the combination and subcombination are presented and assumed to be patentable. The omission of the specific details of the sequence generator of the subcombination in the independent claims of the combination is an evidence that the combination (I) does not rely on the details of the specific subcombination (II), for patentability. In addition, the subcombination (I) clearly has a separate utility as sequence generation. Therefore, the inventions I and II are clearly distinct, and because the search require of Group I does not required for Group II, the restriction for examination purposes as indicated is thus proper.
